

Name & ID:

Please provide answers under each question.

Based on the pre-reading material, list 3 advantages and disadvantages of 5G wireless connections over 4G.

Advantages:

- Support huge amount connection simultaneously
- reliable, no delay, no packet loss
- low latency

Disadvantages:

- more expensive
- more complex, so customer need to investigate about how to use it
- too powerful, most company do not need it right now

Question 1: Can 5G Connection be pervasively used in different industries? Explain with a few reasons.

Answer: Yes, as long as industry need to use internet, and have requirement about internet speed, reliability, they may need to consider about 5G

Question 2: Is 5G connection continuously improving and lowering in cost? Give examples of improvement if your answer is yes.

Answer:

Yes /
iteration,

Yes, most country have
the devices

Question 3: Can 5G connection spawn innovation in other areas by making it easier to invent and produce new products or processes? Explain with a few reasons.

Answer:

→ maybe, some tech require reliable internet cannot be innovent.

Question 4: Is 5G wireless technology fundamentally disruptive and foundational?

Answer:

No ←
it cannot do
something "special"

↓ Yes,
every smart device
can use it.
