

INFO6007 Week 12 – Answer Guide (Set 2)

Part 1 – Quick Quiz Battle (MCQ Answers)

Q1 Answer: b) Gantt Chart

Q2 Answer: c) Analogous Estimation

Q3 Answer: b) Retrospective

Q4 Answer: c) Risk Register

Q5 Answer: a) Fixed Price Contract

Part 2 – Scenario-Based Practice Questions

Quality Management

Poor quality management can reduce user satisfaction, create system failures, and increase rework costs. A suitable improvement strategy is conducting regular testing and quality assurance reviews throughout development.

Schedule Management

Dependency issues create bottlenecks because delayed activities directly impact dependent tasks. One strategy to reduce schedule risk is cross-training team members so multiple staff can handle critical activities.

Agile & Stakeholder Management

Frequent requirement changes can reduce sprint focus and create confusion for developers. A suitable strategy is prioritising and locking sprint goals during sprint planning sessions.

Procurement & Vendor Management

One advantage of external vendors is access to specialised expertise and resources. One disadvantage is communication and coordination challenges that may delay project delivery.
