Answer: c) Oversight and accountability

Q4. Which communication issue is most likely to reduce team morale?

Answer: b) Unclear expectations

Q5. Which quality perspective focuses on whether the system effectively serves user needs?

Answer: b) Fitness for use

Part 2 – Scenario-Based Practice Questions

Leadership & Team Management

A collaborative leadership approach could improve productivity and morale by supporting junior developers while reducing pressure on senior staff through mentoring, workload balancing, and regular communication.

This strategy encourages teamwork, knowledge sharing, and stronger team relationships.

Governance

Governance is important in highly regulated IT projects because it ensures compliance, accountability, budget oversight, and alignment with organisational policies.

In fintech projects, governance helps ensure the banking application meets security, legal, and regulatory requirements.

ITSM Value Creation

According to ITSM principles, services create value when they help users achieve desired outcomes effectively.

Although the student portal is technically functional, poor usability and slow performance reduce customer satisfaction and overall service quality.

Communication Management

Improved communication structures such as regular meetings, shared collaboration tools, and standard reporting processes can reduce delays and improve coordination.

Effective communication helps remote teams stay aligned, share updates consistently, and improve overall project performance.
