Part 2 – Scenario-Based Practice Questions

Scope Management

A mobile app project team keeps adding new features requested by senior managers without adjusting the timeline.

Question:

Explain ONE negative effect of uncontrolled scope changes and recommend ONE practical control mechanism.

Cost & Resource Management

A project is facing increased overtime costs because the original project schedule was unrealistic.

Question:

Discuss TWO possible reasons why poor scheduling can increase project costs.

Risk Management

A fintech company is concerned about data breaches while deploying a new online payment system.

Question:

Recommend ONE suitable risk response strategy and explain why it is appropriate in this scenario.

Procurement & Governance

A company signs a fixed-price contract with a software vendor, but the project requirements later change significantly.

Question:

Discuss ONE benefit and ONE challenge of using fixed-price contracts in IT projects.
